Global resources of manganese by region

- **Geological regions with >50 million tonnes of manganese**
  - Geoscience Australia
  - Regional resources are the aggregate of resources in deposits.
  - Compilation of data is ongoing.

- **Deposits**
  - Geoscience Australia has tried to make the information in this product as accurate as possible. However, it does not guarantee the information is accurate or complete. THEREFORE, YOU SHOULD NOT RELY SOLELY ON THIS INFORMATION WHEN MAKING A COMMERCIAL DECISION.

- **Copies of this map may be downloaded from the Geoscience Australia website: [Resources and Tourism](https://www.ga.gov.au)**

Geoscience Australia, GPO Box 378, Canberra City, ACT 2601

This map is based on information compiled from publicly available sources on some Australian manganese deposits, including wildcat and large deposits. Compilation of data is ongoing.

Deposit size is the total tonnage of manganese that is or was in a deposit as estimated by Geoscience Australia. It was derived by summing the remaining aggregate production from a deposit or creature over the life of the deposit or by summing the remaining aggregate production from a deposit or more detailed.

Regional resources are the aggregate of resources in deposits occurring in the region. Regional definitions are based on Geoscience Australia's Geographical dataset. Subdivisions of the Lachlan and Yilgarn Craton are based on data from published sources.

Location information used in this map is derived from Geoscience Australia's Australian Geospatial Information Corporation. It is recommended that this map be referred to as: Huleatt, M.B., Seddon, M.G., Jaret, S. (2020). Australian Manganese Resources (Sheet 1: Resources by region). December 2020 edition. 1:10 000 000 scale map, Geoscience Australia.
